properties formation

processes pdf - An aerosol

is a suspension of fine solid
particles or liquid droplets,

in air or another gas.

Aerosols can be natural or
anthropogenic. Examples of

natural aerosols are fog,

dust, forest exudates and

geyser steam. Aerosol -

Wikipedia - Electrospinning

is a fiber production method

which uses electric force to

draw charged threads of

polymer solutions or

polymer melts up to fiber

diameters in the order of

some hundred nanometers.
